Fire break maintenance – roadside planned fuel reduction burn Zamia Creek

1 Introduction

The South Walker Creek Coal Mine (SWC Mine) is located in the Bowen Basin region of Queensland, approximately 125km south-west of Mackay. The Mulgrave Resource Access (MRA) project's offset obligations relating to impacts to matters of national environmental significance (MNES) were imposed by the then Department of Environment (DoE) via the environmental approval dated 16 January 2015 (EPBC 2014/7272). The approval for the MRA project requires that the proponent offset the loss of 59ha of the brigalow threatened ecological community (TEC), which includes habitat for the ornamental snake (*Denisonia maculata*) which is a listed threatened species under the *Environmental Protection and Biodiversity Conservation Act 1999* (EPBC Act).

The offset to satisfy the brigalow obligation for the MRA project is located on Dabin Holdings, a rural property owned by Stanmore. Dabin Holdings is located approximately 45km north of Moranbah and 68km west of Nebo within the Isaac Regional Council area in Central Queensland. The offset for the impacts on habitat for the ornamental snake is located on a third-party owned property known as Zamia Creek, located on the Dawson Highway, 5 km east of Bauhinia, in Central Queensland. As part of the approval conditions, BMC was required to develop and implement a monitoring program and a process to review and report on the progress of the Offset Management Plan. These monitoring and reporting requirements are detailed in the Biodiversity Offset Management Plan for Kemmis II Project and Mulgrave Resource Access Project (BMC, August 2015) and the Offset Area Management Plan for Kemmis II Project and Mulgrave Resource Access Project (BMC, August 2015) (OAMP).

Routine inspections of the offset area for monitoring and reporting purposes were undertaken throughout the period by Stanmore (Hardy Wincen) and the Licensee for Dabin Holding (David and Sam Wright). The offset area was found to be compliant with both the Conditions of Approval and the OAMP. The MRA brigalow offset areas on Dabin Holdings consist of regrowth brigalow regional ecosystem (RE) 11.9.5 and RE 11.3.1. The ground cover in these areas has small incursions of buffel grass and Indian couch grass. Existing brigalow regrowth at the monitoring sites is healthy and is responding well to the above average wet season. The MRA ornamental snake offset area on Zamia Creek is in good condition. Brigalow regrowth was 4m-6m in height and shading out buffel grasses directly beneath, with leaf litter at 90% of groundcover.

SWC was previously owned by BHP Billiton Mitsui Coal (BMC). On the 3 May 2022, BHP divested its 80% share of its share to Stanmore Resources and in October 2022 Mitsui divested the remaining 20% to Stanmore. SWC now forms part of the Stanmore SMC Pty Ltd (SMC) assets within Stanmore Resources.

The following annual report addresses compliance with the conditions of the EPBC Act approval (Approval Reference EPBC2014/7272) as required under Condition 9 of the initial approval and the "Variations to Conditions to Align Annual Reporting Dates for EPBC2013/7025, EPBC 2014/7272 and EPBC 2016/7788 (reporting variation)" dated 7th September 2020 on Stanmore Resources website (<https://stanmore.net.au/>) and evidence will be submitted to the Department.

The annual reporting variation requires a compliance report to be prepared for the period July 1st to June 30th each year. This report will be published on the Stanmore Resources website within **60 business days** of 30 June. The following report shall address compliance with all conditions in accordance with Condition 9 of the EPBC Act approval and the reporting variation.

2 Description of Activities

Details	
EPBC Number	2014/7272
Project Name	Mulgrave Resource Access (MRA) – Continuation of South Walker Creek Mine (SWC)
Approval Holder and ABN	Stanmore SMC Pty Ltd ABN: 34 009 713 875
Approved Action	Approved action is described in Section 2.0 of South Walker Creek Mine Mulgrave Resource Access EPBC Act Preliminary Documentation (EPBC 2014/7272) dated 17 September 2014.
Location of the Project	The mine is located approximately 25km west-southwest of Nebo, Queensland in the Bowen Basin within the boundaries of Mine Lease 4750 (ML4750). The proposed action is to take place on approved Surface Areas 2, 3 and 4 associated with ML4750.
Person accepting responsibility for the report	Hardy Wincen Principal Land Access
Date of Preparation	9 th September 2026

4 Compliance Table

In accordance with condition 9 of the *EPBC Act* approval (Approval Reference EPBC2014/7272), this report provides an update of SWC's compliance against the relevant approval conditions (Table 1). Table 2 and Table 3 provides an update of SWC's compliance against Offset Management Plans (required under condition 3 of the EPBC approval).

Table 1 South Walker Creek Mine - Mulgrave Pit Extension EBPC 2014/7272 Compliance Report

Condition Number	Condition	Compliant / Non-Compliant / Not Applicable	Evidence / Comments
Project Area			
1	The project area located approximately 25 kilometres west-southwest of Nebo, Queensland is the area designated in Annexure A and includes areas contained within Mining Lease (ML) 4750. The approval holder must not clear outside of the project area.	Compliant	Clearing activities are only carried out in the approved areas in accordance with site procedures.
Disturbance Limits			
2	The approval holder must not clear more than 59 hectares of Brigalow (<i>Acacia harpophylla</i> dominant and co-dominant) ecological community within the project area, which includes 17.5 hectares of Ornamental Snake (<i>Denisonia maculata</i>) habitat.	Compliant	Areas cleared are within the hectare limits specified in this condition. Area Cleared as of 30 June 2026: Brigalow (<i>Acacia harpophylla</i> dominant and co-dominant) – 45.5 hectares Ornamental Snake (<i>Denisonia maculata</i>) habitat – 12.3 hectares
Offset Management Plan			

Condition Number	Condition	Compliant / Non-Compliant / Not Applicable	Evidence / Comments
3	To compensate for authorised unavoidable impacts on MNES (see condition 3), the approval holder must submit OMPs to the Minister for approval. The approval holder must not undertake substantial commencement until the Minister has approved the OMPs in writing. The approved OMPs must be implemented.	Compliant	The OMPs¹ were submitted to the Department and approved. The OMPs have been implemented. An OAMP was developed with the purpose being to identify the management objectives and outcomes, and the actions necessary to fulfil the OMP requirements for both the Kemmis 2 (EPBC 2013/7025) and Mulgrave Resource Area (MRA) (EPBC 2014/7272) projects. The OMP was submitted to the Department and approved. The OMP commenced implementation following the start of construction for MRA (EPBC 2014/7272) on the 30th of March 2015. The Zamia Creek OAMP for Ornamental Snake was approved in July 2015.
4	The OMP for Brigalow (<i>Acacia harpophylla</i> dominant and co- dominant) ecological community must be located at Dabin Holdings (Lot 2 SP 214117), a property within the Isaac Regional Council, Queensland (shown at Annexure B). The offset must include at least 125 hectares of Brigalow (<i>Acacia harpophylla</i> dominant and co-dominant) ecological community as proposed in the preliminary documentation. The Brigalow OMP must be submitted to the Minister prior to substantial commencement of the action. The approved Brigalow OMP must be implemented.	Compliant	The offset for Brigalow is located at Dabin Holdings (Lot 2 SP 214117) and includes 125 hectares of Brigalow ecological community. The OMPs were submitted to the Department for approval on the 18 August 2015. The Plans were approved by a delegate of the Minister for the Environment on the 26 August 2015. The OMPs have been implemented.
5	The OMP for Ornamental Snake (<i>Denisonia maculata</i>) will be calculated consistent with the offsets assessment guide, and be influenced by the site quality, site condition and species richness, but will exceed the 17.5 hectares impacted in the project area. The OMPs must be agreed by the Minister within 6 months of commencement of the Walker Creek diversion and prior to substantial commencement.	Compliant	The Mulgrave Ornamental Snake Offset Delivery Plan (ref: 20141889C) covers an offset area exceeding 17.5 hectares for the ornamental snake (<i>Denisonia maculata</i>). The Offset Delivery Plan was submitted to the Department for approval on the 30 June 2015. The Plans were approved by a delegate of the Minister for the Environment on the 28 July 2015.

¹ The preparation of Offset Management Plans in accordance with the Conditions of EPBC 2014-7272 was addressed in the following document: Biodiversity Offset Management Plan for Kemmis II Project and Mulgrave Resource Access Project (BHP, 2015). This document includes an Offset Area Management Plan (titled Offset Area Management Plan for Kemmis II Project and Mulgrave Resource Access Project) as an appendix. For the Zamia Creek property the Mulgrave Ornamental Snake Offset Delivery Plan (ref: 20141889C) includes the Offset Area Management Plan for Mulgrave Expansion Project- Zamia Creek (North Section) (Earthtrade, June 2015) https://www.bhp.com/-/media/bhp/regulatory-information-media/coal/bhp-billiton-mitsui-coal/south-walker-creek/bmc-mulgrave-pit-ornamental-snake-offset-delivery-plan/150804_coal_bmc_southwalkercreek_schedule1offsetareamanagementplan.pdf

Condition Number	Condition	Compliant / Non-Compliant / Not Applicable	Evidence / Comments
6	The OMPs must include, but not be limited to, the following information for both Brigalow (<i>Acacia harpophylla</i> dominant and co-dominant) ecological community and Ornamental Snake (<i>Denisonia maculata</i>): a) details of the offset attributes (including maps in electronic Geographic Information System (GIS) format with accompanying shapefiles), site descriptions, environmental values relevant to MNES, connectivity with other habitat and biodiversity corridors , a rehabilitation program, and conservation and management measures for long-term protection; b) a detailed survey and description of the offset site, by a qualified ecologist, to clearly identify baseline conditions, establish performance indicators and discuss methods for adaptive management. This must include but not be limited to: i. a description (prior to any management activities, hence a baseline) of the current condition of the extant vegetation of each offset area location of survey points (GPS reference); ii. the quantity of habitat for EPBC Act listed species or communities (in hectares), found within each offset area; iii. the condition class of habitat for EPBC Act listed species or communities found within each offset area; iv. vegetation condition mapping; v. photo reference points; vi. tree age class representation; vii. percentage tree canopy cover; viii. number of native plant species in ground layer ;	Compliant	As approved by the Minister for the Environment, the OMPs include the required components.

Condition Number	Condition	Compliant / Non-Compliant / Not Applicable	Evidence / Comments
	ix. percentage of native and foreign grass cover and whether the grass species are annual or perennial ; x. description of fauna habitat including condition, type and connectivity; and xi. fauna surveys (fauna assemblages and species richness) including but not limited to EPBC Act listed species. c) plans to improve upon the baseline condition of Brigalow (<i>Acacia harpophylla</i> dominant and co-dominant) ecological community and Ornamental Snake habitat consistent with EPBC listing advice. These plans must include: i. a map showing areas to be managed ii. management actions for each area and details of methods to be used. These must include: a. actions consistent with objectives stated in relevant threat abatement plans; and b. weed control measures to reduce/control the presence of foreign perennial weeds within Brigalow (<i>Acacia harpophylla</i> dominant and co-dominant) ecological community and Ornamental Snake habitat iii. timing of management activity for each area; iv. performance criteria for each area; v. a set of measurable ecological indicators for detecting changes to the Brigalow (<i>Acacia harpophylla</i> dominant and co-dominant) ecological community and Ornamental Snake habitat; vi. a monitoring plan to assess the success of the management activities measured against the		

Condition Number	Condition	Compliant / Non-Compliant / Not Applicable	Evidence / Comments
	baseline condition. The monitoring must be statistically robust and able to quantify change in the condition of the Brigalow (<i>Acacia harpophylla</i> dominant and co-dominant) ecological community and Ornamental Snake habitat. This should include, but not be limited to, control sites and periodic ecological surveys to be undertaken by a qualified ecologist; vii. a description of the potential risks to successful management against the performance criteria, and a description of the contingency measures that would be implemented to mitigate these risks; viii. a process to report to the Department, the progress of management activities undertaken in the offset areas and the outcome of those activities, including identifying any need for improved management and activities to undertake such improvement; and ix. details of the various parties responsible for management, monitoring and implementing the management activities, including their position or status as a separate contractor; and d) a completed offsets assessment guide for the proposed offset site and a discussion as to how figures used to complete the offsets assessment guide were derived.		
Mechanism to Secure Offsets			

Condition Number	Condition	Compliant / Non-Compliant / Not Applicable	Evidence / Comments
7	The approval holder must, within 2 years of commencement of construction (or as required under relevant Queensland legislation, whichever is earlier), register a legally binding conservation mechanism over the offset areas approved by the Minister in the OMP, described in conditions 3-5.	Compliant	A Voluntary Declaration for Lot 2 SP214117 was entered into on the 20th of October 2015 for Dabin Holdings. BMC discovered the offset area was incorrectly projected on the state mapping and requested the mapping be corrected on 25th February 2021. BMC were advised that a Property Map of Assessable Vegetation (PMAV) was certified by the Department of Resources (the department) on 12 May 2021. The Declared area Map, 2015/006292, has also been amended. A Voluntary Declaration for Lt 9 on BH194 - Woorabinda Aboriginal Shire Council was entered into on the 21st of August 2015 to protect ornamental snake habitat. Construction commenced on the 30th of March 2015.
General			
8	Within 14 days after the commencement of construction, the approval holder must advise the Department in writing of the actual date of commencement of construction.	Compliant	Written notification was provided to the Department on 30 March 2015 to advise the Department that construction works which constitute the 'Commencement of Operations' as defined by the approval, have commenced on site.
Annual Compliance Reporting			
9	The approval holder must prepare a compliance report for each 12 month period following the date of commencement of the action, or otherwise in accordance with the annual date that has been agreed in writing by the minister. The approval must: a) publish each compliance report on the website within 60 business days following the relevant 12 month period; b) notify the department by email that a compliance report has been published on the website and provided the weblink for the compliance report within five business days of the date of publication; c) keep all compliance reports publicly available on the website until this approval expires; d) exclude or redact sensitive ecological data from the compliance reports published on the website; and	Compliant	On the 7th September 2020 the Department agreed to a 'Variation' to Condition 9 to align the annual compliance reporting and publication dates of BMC offsets approvals 2013/7025, 2014/7272 and 2016/7788 whereby each annual report must cover the full year ending on 30 June. The variation further required BMC to publish each annual compliance report on their website within 60 business days of 30 June covered by that report. This annual compliance report is for the period 1st July 2025 to 30th June 2026 for EPBC Act approval 2014/7272 and will be published on Stanmore Resources website (https://stanmore.net.au/) and evidence will be submitted to the Department.

Condition Number	Condition	Compliant / Non-Compliant / Not Applicable	Evidence / Comments
	e) where any sensitive ecological data has been excluded from the version published, submit the full compliance report to the Department within 5 business days of publication Note: Compliance reports may be published on the Departments website		
Reporting a Non-Compliance			
9A	The approval holder must notify the Department in writing of any: incident; non-compliance with the conditions; or non-compliance with the commitments made in the plans. The notification must be given as soon as practicable, no later than two business days after becoming aware of the incident or non-compliance. The notification must specify: a) any condition which is or may be in breach; b) a short description of the incident and/or non-compliance; and c) the location (including coordinates), date, and time of the incident and/or non-compliance. In the event the exact information cannot be provided, provide the best information available.	Not Applicable	Not triggered.
9B	The approval holder must provide to the department the details of the incident or non-compliance with the conditions or commitment made in the plans as soon as practicable and no later than 10 business days after becoming aware of the incident or non-compliance, specifying: a) any corrective action or investigation which the approval holder has already taken or intends to take in the immediate future; b) the potential impacts of the incident or non-compliance; and	Not Applicable	n/a

Condition Number	Condition	Compliant / Non-Compliant / Not Applicable	Evidence / Comments
	c) the method and timing of any remedial action that will be undertaken by the approval holder		
General			
10	Upon the direction of the Minister, the approval holder must ensure that an independent audit of compliance with the conditions of approval is conducted, and a report submitted to the Minister. The independent auditor must be approved by the Minister prior to the commencement of the audit. Audit criteria must be agreed to by the Minister and the audit report must address the criteria to the satisfaction of the Minister.	Compliant	Stanmore SMC were requested to undertake an independent audit of compliance with this approval on 13 th March, 2026. Nominated auditors and audit criteria have been approved by the department.
11	If the approval holder wishes to carry out any activity otherwise than in accordance with the plans, as specified in the conditions, the approval holder must submit to the Department for the Minister's written approval a revised version of that plan. The varied activity shall not commence until the Minister has approved the revised plan in writing. The Minister will not approve a revised plan unless the revised plan would result in an equivalent or improved environmental outcome. If the Minister approves the revised plan that plan must be implemented in place of the plan originally approved.	Not Applicable	All activities being carried out are in accordance with the approved management plans. The Department was notified on 14 June 2021 of planned works including the installation of new infrastructure associated with new fencing, firebreaks and water infrastructure for the purpose improving the ecological condition of the offset area through adaptive management of livestock grazing and improved fire management. This work was completed in 2022 following careful assessment of the Cultural Heritage values at the offset location.
12	If the Minister believes that it is necessary or convenient for the better protection of listed threatened species and communities to do so, the Minister may request that the approval holder make specified revisions to the management plan specified in the conditions and submit the revised plan for the Minister's written approval. The approval holder must comply with any such request. The revised approved plan must be implemented. Unless the Minister has approved the revised plan then the approval	Not Applicable	No revisions were requested by the Minister during submission of the management plans.

Condition Number	Condition	Compliant / Non-Compliant / Not Applicable	Evidence / Comments
	holder must continue to implement the originally approved plan, as specified in the conditions.		
13	If, at any time after 5 years from the date of this approval, the approval holder has not substantially commenced the action, then the approval holder must not substantially commence the action without the written agreement of the Minister.	Not Applicable	Construction works commenced on site in March 2015. A letter was issued to the Department confirming the 'Commencement of Operations' as defined by the approval.
14	The approval holder must maintain accurate records substantiating all activities and outcomes associated with or relevant to the above conditions of approval, including measures taken to implement the management plans required by this approval, and make them available upon request to the Department. Such records may be subject to audit by the Department or an independent auditor in accordance with section 458 of the EPBC Act or used to verify compliance with the conditions of approval. Summaries of audits will be posted on the Department's website. The results of audits may also be publicised through the general media.	Compliant	BHP has provided Stanmore Resources with records following the divestment of 3rd May 2022. Stanmore Resources will maintain all further records in accordance with Condition 14.
15	Unless otherwise agreed to in writing by the Minister, the approval holder must publish all management plans referred to in these conditions of approval on their website. Each management plan must be published on the website within 1 month of being approved and remain published for the life of this approval.	Compliant	The approved OMPs referred to in the approval conditions have been published on the BHP website until May 3 rd 2022. Upon acquisition of the South Walker Creek mine by Stanmore the OAMPs are now posted on Stanmore Resources website (https://stanmore.net.au/)

Table 2 Schedule of Management Actions for the Brigalow Offset

Management Activity	How the Action will be Carried Out	Where the Action will be Carried out	When the Action will be Carried Out	Who will be Carrying out the Activity	Progress / Measurable Outcomes	Comments / Corrective Actions	Progress Report
Weed Management Offset Area Requirement (Section 6) Declared Pest Plants listed under the <i>Land Protection (Pest and Stock Route Management) Act 2002</i>	Maintain the existing weed monitoring and control program to keep weed cover below 5% of the total Offset Area.	Weeds to be controlled by chemical spraying in the Offset Area as depicted in the map at Attachment 1 of the OAMP.	The Landowner will undertake regular assessments of the Offset Area for weed infestations. Should the weed infestation cover more than 5% of the Offset Area, then any additional weed control required in the Offset Area will be undertaken as early as practicable within the regeneration process and then periodically as required by seasonal conditions, to treat the weeds at the optimum time in their life cycles, to control infestations and minimise their spread.	Landowner or lessee of landowner (subject to negotiations).	Biennial photo point monitoring in the Offset Area. Then BioCondition monitoring every 5 years starting at Year 5.	Photo point reporting is to be undertaken by BMC biennially. BioCondition reports are to be submitted every 5 years starting at Year 5.	The level of declared pest plants listed under the Land Protection (Pest and Stock Route Management) Act 2002 has remained well below 5% of the offset area over this time. The updated fencing has allowed an improved grazing rotation that is reducing fuel load and still able to preserve ground cover. Compliant with these Activities
Fire Management	The Landowner within 12 months from the date of this Offset Area Management Plan coming into effect will request to have a suitably qualified member of the Rural Fire Service Brigade (RFSB) assess the suitability of	The Landowner must within 12 months from the date of this Offset Area Management Plan coming into effect have a member of the Rural Fire Service Brigade (RFSB) attend and	The Landowner within 12 months from the date of this Offset Area Management Plan coming into effect will request to have a suitably qualified member of the Rural Fire Service	The Landowner must within 12 months from the date of this Offset Area Management Plan coming into effect have a member of the Rural Fire Service	Biennial photo point monitoring in the Offset Area. Then Biocondition monitoring every 5 years starting at Year 5.	Photo point reporting is to be undertaken by BMC biennially. Biocondition reports are to be submitted every 5 years starting at Year 5.	Firebreaks around the offset areas on the property are co-located with access tracks. The tracks around the boundary of the offset have been slashed enabling access for fire management.

South Walker Creek Mine – Mulgrave Pit Extension

	the current and proposed firebreaks and, where recommended by the RFSB, will implement those recommendations within 6 months from receipt of those recommendations. Stock will be grazed in the Offset Area for fuel reduction purposes. The Landowner is to ensure that the Offset Area does not become over grazed or degraded.	within 6 months from receipt of any RFSB recommendations, implement those recommendations. The Landowner is not to graze stock for any longer than two (2) months at a time and no more than three times per year except if an exemption applies under section 6 of the Offset Area Management Plan.	Brigade (RFSB) assess the suitability of the current and proposed firebreaks and, where recommended by the RFSB, will implement those recommendations within 6 months from receipt of those recommendations. Stock will be grazed in the Offset Area for fuel reduction purposes. The Landowner is to ensure that the Offset Area does not become over grazed or degraded.	Brigade (RFSB) attend and within 6 months from receipt of any RFSB recommendations, implement those recommendations. The Landowner is not to graze stock for any longer than two (2) months at a time and no more than three times per year except if an exemption applies under section 6 of the Offset Area Management Plan.			Compliant with these Activities
Restricted Access	Access is strictly controlled, available to only the landholder and employees as required.	Offset Area	Maintained for the life of this Management Plan	Landowner or lessee of landowner (subject to negotiations).	N/A	N/A	Compliant with these Activities
Erosion and Sediment Control	Minimise erosion caused by stock and ensure the ground maintains stability	The Landowner is to monitor the effects of stock grazing and is to ensuring that there is always off stream watering points available for any stock in the area. If the landowner notices	The Landowner is to monitor the effects of the stock grazing at least once per month when stock are in the Offset Area.	Landowner.	Biennial photo point monitoring in the Offset Area. Then Biocondition monitoring every 5 years starting at Year 5.	Photo point reporting is to be undertaken by BMC biennially. Biocondition reports are to be submitted every 5 years starting at Year 5.	Groundcover levels at the time of inspection were in excess of 70% across the offset area with no signs of erosion from the above average wet season. Compliant with these Activities

South Walker Creek Mine – Mulgrave Pit Extension

September 2026

Management Activity	How the Action will be Carried Out	Where the Action will be Carried out	When the Action will be Carried Out	Who will be Carrying out the Activity	Progress / Measurable Outcomes	Comments / Corrective Actions	Progress Report
		that the land is eroding, then the Landowner is to exclude or remove the stock from the affected area until such time as the conditions are more desirable to enable grazing stock to return to the area without adversely impacting on the ground. The Landowner is to take all reasonable and appropriate action to remedy any erosion caused by stock.					
Enhancing Biodiversity	Allow the accumulation of fallen timber/debris and the establishment of natural undergrowth. The activity is to be carried out by not removing the fallen timber/debris from the Offset Area.	The accumulation of fallen timber/debris is to occur throughout the Offset Area.	This is to be carried out of the life of this Offset Area Management Plan.	Landowner or lessee of the landowner.	Biennial photo point monitoring in the Offset Area. Then Biocondition monitoring every 5 years starting at Year 5.	Photo point reporting is to be undertaken by BMC biennially. Biocondition reports are to be submitted every 5 years starting at Year 5.	No fallen timber or debris has been removed from the offset area, thereby allowing it to accumulate, which is expected to enhance the biodiversity of the offset area. No regrowth control measures have been undertaken in the offset area. Compliant with these Activities
Livestock Management	Stock will be grazed in the Offset Area for fuel reduction purposes only.	The Landowner is to graze stock in the following manner. There are no set stocking rates or	The Landowner is not to graze stock for any longer than two (2) months at a time and no more than three	Landowner or lessee of the landowner.	The Landowner must keep the Landowner Records as detailed in Section 7 of the	Photo point reporting is to be undertaken by BMC biennially.	This offset area is now entirely contained within the Offset Brigalow paddock. Livestock movements are recorded.

Offset Area Management Plan.	Biocondition reports are to be submitted every 5 years starting at Year 5	The MRA Brigalow offset area on requires heavy grazing over winter to reduce the fuel load and mitigate the fire risk. The new division fence and water points allow for better dispersal of stock across the area at a higher stocking rate. Compliant with these Activities

Table 3 Schedule of Management Actions for the Ornamental Snake Offset

Management Activity	How the Action will be Carried Out	Where the Action will be Carried out	When the Action will be Carried Out	Who will be Carrying out the Activity	Progress / Measurable Outcomes	Comments / Corrective Actions	Progress Report
Forestry Operations, Native Timber Harvesting and General Vegetation Clearing	Vegetation clearing on the Offset Area is restricted to: a) that necessary for the removal of non-native weeds or declared pests; b) establishing and maintaining fencing around the boundary of the declared area; c) establishing and maintaining fire breaks; and d) ensure public safety Vegetation clearing for any other purpose is not permitted within the offset area.	Only in those areas subject to non-native weed control, fire control lines and fences.	As required and identified in the quarterly inspections of the fences and collocated fire control lines.	Landowner or suitable qualified person appointed by the Landowner.	No evidence of recent forestry or timber harvesting activities are evident during term of the offset management plan. Any illegal clearing to be recorded in the landholder records and identified during the monitoring and reporting program.	Any evidence of clearing apart from weeds is to be noted in the Annual Landholder reports. If evidence of recent timber harvesting is noted during inspections, the landholder is to reassess access protocols for any lessees etc., signage and general access.	No evidence of timber harvesting was apparent over the reporting period. Compliant with these Management Actions
Fire	Fire is to be, excluded from the Offset Area except for low intensity ecological burns by: a) Maintaining firebreaks relative to the Offset Area; b) Using a low intensity fire >20 years interval; and c) Firebreaks are to be co-located with roads and fence lines on the property where possible. Note:	Throughout the Offset Area	Fire Control lines are to be inspected weekly and maintenance undertaken as required but at an interval of at least each 2 years. If fire is used at all, it is to be at a low intensity fire at >20 years interval.	Caretaker will undertake weekly inspections, Pastoral Manager monthly inspections. Grading of the fire breaks is to be undertaken by a suitable qualified person appointed by the Pastoral Manager or council CEO.	No evidence of fire is observed during the term of the offset management plan, except for prescribed mosaic >20 year burns. Any incidence of wild fire or illegal burning (Force Majeure) is to be identified during weekly inspections and documented within	Any occurrence of fire in the Offset Area is to be noted during weekly inspections of the property and recorded in the Annual Landholder reports. Corrective action: Check and repair all fire control management	No occurrences of fire noted in the Landholder records, and no evidence of fire was apparent. Firebreaks around the offset areas are co-located with access tracks. The boundary and internal fence lines are in excellent condition. Fence line breaks maintained – graded. Fuel reduction burn completed on the adjacent road reserve.

	Fire is not to be used as a tool for regrowth management on the Offset Area.				the monitoring and reporting program.	lines. Destock the offset area, re-establish fire breaks and control lines and if appropriate, widen fire control lines and reassess fuel load reduction practices. Fire and grazing excluded until the grasscover has increased to 50% using the methodology in the Land Manager's Monitoring guide as attached.	Compliant with these Management Activities
Grazing	There is no set stocking rates as this region is subject to significant changes in grass cover with seasonal conditions. It is recognised that competition from non-native pasture species can have a negative effect on the establishment of brigalow communities. Grazing is therefore restricted as per these management actions to reduce the risk of high-intensity fires and to manage the levels of	A new fence is to be established to exclude cattle from the Zamia Creek watercourse and another fence is to be established along the eastern boundary of the combined 490ha offset area, which includes this offset area. Stock will be grazed in the Offset Area for	As required when grass fuel loads exceed 50%. During the dry season. Establish the new fence by December 2016. The dry season is normally between April and October; however, if unseasonal rainfall should occur, then grazing is to be	Pastoral Manager	The Landowner, at their discretion, may graze stock during the dry season, at rates and times necessary to reduce the fuel load in the Offset Area without lowering the grass cover to below 30% at the end of the dry season.	The property Caretaker will undertake twice weekly inspections when stock are grazing the offset area. The Pastoral Manager will undertake monthly inspections of the property to ensure that cattle are not	Stock excluded. Dense clumps of brigalow regrowth are leaf mulching areas directly beneath. In general there was a very low level of weeds. Compliant with these Management Activities

Management Activity	How the Action will be Carried Out	Where the Action will be Carried out	When the Action will be Carried Out	Who will be Carrying out the Activity	Progress / Measurable Outcomes	Comments / Corrective Actions	Progress Report
	due to the small numbers that occur. Current control of pigs and wild dogs is undertaken via an annual baiting programme on the property. Additional to this measure, the caretaker, during weekly inspections of the offset area is to shoot any wild pigs or wild dogs that are seen. If an increase in pig or dog activity is noted, an additional trapping and shooting programme is to be instigated until the increased activity has ceased.				be collected quarterly and included in the Monitoring and Reporting to the Regulator.	activity is noted during regular landholder inspections of the offset area, then a programme of baiting and or pig trapping is to be instigated until the population and occurrence of these pests is reduced. This will have a greater impact if control measures are integrated with neighbouring properties.	
Pests – Weed Management	1. Keep the introduction, establishment and spread of non-native weeds including Declared Pest Plants listed under the Land Protection (Pest and Stock Route Management) Act 2002 (Qld) to less than 10% weed cover over the Offset Area. 2. Control existing infestations of non-native weeds including Declared Pest Plants under the Land Protection (Pest and Stock Route Management) Act	Throughout the offset area	Any weed control required will be undertaken as early as practicable within the natural regeneration process throughout the Offset Area and then periodically as required to treat the weeds at the optimum time in their life cycles to control and minimise the spread	Pastoral Manager, caretaker or suitable qualified person appointed by the Landowner.	Observations during routine property inspections by the caretaker (weekly) or by the Pastoral Manager (monthly). Incidence, observations and resultant control measures are to be recorded via photos and additionally by the photopoint and Terrestrial Habitat Quality Assessment	Corrective action: The level of weed infestation is low in the observed areas and spot spraying of small outbreaks observed during routine property inspections should suffice. Broadscale chemical spraying is NOT supported	Overall weed cover has remained below 5% of the offset area over this time. Compliant with these Management Activities

	population on which it is reliant. 5. Spot spraying of patches of parthenium and mother of millions is allowed as required. 6. The rare occurrences of tree pear are to be treated as per the recommended advice at the time of treatment.						

Dabin Offset Area - Grazing, Fire and Routine Monitoring

The Dabin Offset Area is managed under the approved Offset Area Management Plan (OAMP). Since 2023, the management focus has been timed rotational grazing supported by fire management. These measures are applied to manage fuel load, weed and non-native groundcover, and native vegetation recruitment.

The licensee records routine land management observations using the Dabin Offset Seasonal Checklist implemented this year. The checklist records weather, grazing intensity and stock movements, pasture management, weeds, pest animals, erosion, fire, fencing and other relevant land management matters. Inspections are undertaken at least quarterly, with monthly checks while cattle are present. Formal ecological monitoring remains the basis for measuring changes in habitat quality and progress against OAMP performance criteria.

Dabin Offset Area - OAMP Implementation Evidence Summary

Management action	OAMP requirement	Reporting period evidence	Record / response
Livestock management	Timed grazing for fuel reduction, for no longer than two months at a time and no more than three times per year unless an OAMP exemption applies. Monitor at least monthly while stock are present.	The offset is contained within the Offset Brigalow paddock. Livestock movements were recorded and an improved grazing rotation was applied.	Seasonal checklist and livestock movement records. Continue recording stock numbers, entry and removal dates, rainfall and ground condition.
Fire management	Maintain firebreaks and use grazing to manage fuel load without overgrazing or degrading the offset area.	Firebreaks are co-located with access tracks. Boundary tracks were maintained to support fire management access.	Seasonal checklist and firebreak inspection records. Record any fire occurrence and resulting response.
Weed management	Undertake regular assessment and control if declared weed cover exceeds the OAMP trigger.	Declared pest plant cover was reported below the OAMP trigger. Grazing rotation was used to manage fuel load while retaining groundcover.	Seasonal checklist, photographs and weed treatment records. Record any trigger and control action.
Erosion and ground condition	Monitor grazing effects at least monthly while stock are present and remove or exclude stock where erosion or unsuitable ground conditions are observed.	Groundcover was reported above 70% at inspection, with no signs of erosion recorded.	Seasonal checklist and photographs. Record erosion, pugging or stock removal if observed.
Native vegetation and habitat features	Retain fallen timber and natural undergrowth. Do not undertake regrowth control within the offset area.	No removal of fallen timber or debris and no regrowth control were reported.	Seasonal checklist and ecological monitoring records.

The seasonal checklist and associated land management records provide evidence that the required management actions and routine inspections were undertaken. Ecological monitoring results should be reported separately when assessing condition change or progress toward performance criteria.

Quarterly Landholder Monitoring Summary

Quarter	Date	Grazing Management	Weed/Pest Observations	Fire Observations	Other Observations	Management Response	OAMP Compliance
Q1 2025	27 Oct 2025	Paddocks empty July. 115 head added to Top Skull Aug, Top Skull Grazing intensity lighter than previous quarter.	No significant increase in weed abundance. Participate in multi property dingo baiting program	No fire occurrence.	Fencing in good condition. No erosion identified.	Fire break slashing completed.	Compliant
Q2 2025	10 Jan 2026	Cattle removed 15 December. Rain Nov 102.5mm and Dec 157mm	Localised Parthenium observed adjacent to access track.	No fire occurrence.	Good seasonal conditions. Increased native grass response observed outcompeting weeds.	Rotational grazing – spelling period while wet.	Compliant
Q3 2026	8 May 2026	Controlled grazing undertaken in 5 paddock rotation. 120 steers High stocking rate with short duration.	No material weed increase observed.	Fuel load significant	Minimal erosion observed after above average wet season. Noted in brigalow areas.	Flood crossing maintenance.	Compliant

Q4 2026	29 July 2026	No rain, some frost and body of feed remains providing good groundcover. 100 head introduced in Apr removed 30 June.	No weed outbreaks. Low pest activity.	No fire occurrence.	Native grass cover remains stable. Fire break slashing completed.	1 wild dog and a number of pigs removed.	Compliant

Commentary

The Licensee implemented the quarterly monitoring program specified in the OAMP through completion of the Dabin Offset Seasonal Checklist. The monitoring program records grazing activity, stock movements, weed and pest observations, fire occurrences, erosion issues and general land management observations within the offset area.

Quarterly records for site inspections identified no material management issues requiring amendment to the current management framework. Rotational grazing, fire management, weed surveillance and general property maintenance were undertaken in accordance with the OAMP. Monitoring outcomes informed adaptive management decisions throughout the reporting period primarily for grazing rotations and provided supporting evidence for ongoing assessment of offset condition.
